

RADIX IOT FOR DATA CENTERS

SUMMARY

Whether you manage one data center or multiple, whether your portfolio is very small or very large, Radix IoT's DCIM Platform can monitor all your equipment, sensors, and devices, gather, and normalize your data into one place while improving operations and reducing expenses. Radix IoT for Data Centers works with retail, wholesale, or enterprise data centers' existing technology to make sense of the current information and improve productivity.

THE RADIX IOT ADVANTAGE

- Solve DCIM complexities with one product—eliminating high costs and typical upgrade risks.
- Organize and unlock ALL critical data.
- Gain actionable insights to enhance operational efficiency and cost reduction.
- Utilize a secure cloud-native platform.

WHY MANGO FOR DATA CENTERS

REAL-TIME AWARE

Know when there is a problem to address the moment it happens. Take charge of using all of your equipment data to continuously improve operational efficiency.

MASSIVE TO MINI

From hyper-scale to edge (and everything in between), Radix IoT has the DCIM Platform to make your operations, management, and maintenance a breeze.

MULTISITE SIMPLICITY

Don't be fooled by complex custom DCIM systems that claim to be easy to deploy globally at scale. Radix IoT provides the only DCIM Application package that is proven and tested to work at 26,000 locations.

PLAYS WELL WITH OTHERS

Radix IoT works with what you already have allowing any Data Center Facility Manager to consolidate their operational view without a costly rip-and-replace philosophy. Zero vendor lock, ever with Radix IoT.

MAKE NEW FRIENDS

Your business has more than one software, so your DCIM Platform should easily play nice with all others. Radix IoT offers an OpenAPI-compliant API allowing robust (yet secure) information exchange with all your other, existing applications.

BUDGET FRIENDLY

Radix IoT offers flexible pricing models that eliminate the common cost traps of other DCIM Solutions in the market. From design to setup and operation - Radix IoT has the modern solution that is nearly half the price of competitors.

SOLVING WHAT MATTERS THROUGH DATA

- 1 MINIMIZE ENERGY SPEND**
- 2 MAXIMIZE UPTIME PERFORMANCE**
- 3 IDENTIFY AND TRIAGE PROBLEMS REMOTELY**
- 4 MANAGE ALL YOUR LOCATIONS IN ONE PLACE**
